

Schenker - BAX performance update

For the Deutsche Bahn AG, the acquisition of BAX Global in the beginning of 2006 has resulted in a considerable enhancement of its competitive position in the worldwide transport and logistics industry. This strength is visible in the half-yearly figures of the group: In the first six months of 2006, Deutsche Bahn AG set new records, in transport performance, revenues and operating profit. The Schenker business unit, including BAX Global, was able to continue its positive performance with a revenue increase of 45.1 percent compared with the first six months of 2005.

Schenker benefits from the strong growth of the international logistics markets and – in addition to the strong performance of existing business operations – the increase in revenues was bolstered by the first-time inclusion of BAX Global.

New Schenker office in Foshan!

A new office just opened in Foshan, on August 28th 2006. This new location strengthens the Schenker South China organization as well as the complete China network.

Schenker: RFID in sea freight provides greater transparency in the supply chain

New technology being tested for suitability in global freight transport - Test phase starts with Hong Kong and Hamburg

At the Port of Hamburg Schenker put into service ten containers equipped with RFID (Radio Frequency Identification) technology. The official commissioning of the new equipment took place in the presence of customers and industrial partners from the port.

This is the first step in a practical test to examine the suitability of new security technology for global freight transport. The new containers will be used in a shuttle service between Hamburg and Hong Kong. An 'RFID tag', an electronic labeling, is used to

improve the transparency of the supply chain.

The container tag will be automatically registered at points where liability changes hands. This means that the shipment will then become immediately visible at transitional milestones of the transport chain. Schenker will also test the 'e-seal', an electronic seal that documents any opening and closing of the container, as well as other security devices that will keep tabs on the shipment.

Good for your business.

Did you know?

that Schenker and BAX Global together worldwide are present:

- in 150 countries
- and 1,500 locations
- with 50,000 experts.
