103室  
邮政编码 130033  
电话：+86-431 4617552  
传真：+86-431 4617553

## Schenker wins logistics award

Schenker won the Institute of Transport Management's European Logistics Company of the Year award earlier this month partly because of its investment in information technology and RFID systems to reduce transportation costs and increase visibility of shipments. The institute's Media & PR director Patrick Sheedy said Schenker "has grown from a company of national renown to one of international repute".

The company has been praised for its ability to continuously adapt to the changing demands of the global freight industry. "By employing Schenker's sophisticated logistics practice companies can accelerate the flows of raw materials, assembly operations and the delivery of finished products. This process can reduce operating costs and improve customer service." Mr Sheedy said.

# Take-off with Schenker & BAX Global

New addition to the worldwide Aeroparts network / Schenker appoints Aeroparts Product Manager to further support the emerging Aerospace industry in China

As an airline, the least you like to experience is an Aircraft on the Ground (AOG). Passengers aren't content with the schedule change and every single minute spent on the ground decreases the airlines' profit. Plenty of airlines rely on the speedy and comprehensive services of an AOG-Desk and its ability to deliver spare parts in due time, perform Express Customs Clearances and meet many other AOG requirements. But there is more to the Aerospace Industry than just the plain delivery of spare parts. Aircrafts require Maintenance and Repair Management services. The ability to schedule and monitor these processes ahead of time is substantial to an airline. Take a look at China's plans to spend heavily on airport development and the expansion of their air fleet. The intended investments will partially focus on building 42 new airports and increasing the number of aircrafts to 1.580 planes by 2010. This represents huge investment op-

portunities for overseas and domestic investors. The market demand for large aircraft is strong and China recently announced its plans to design and manufacture large aircraft in the next 5 years. Foreign aviation companies are expected to deliver increasing numbers of wide-body planes to China within the next 3 years. With this enormously fast growing air fleet, the need for qualified and reliable service providers in the field of aero parts becomes apparent. Schenker and BAX Global jointly offer a comprehensive range of services to the Aerospace industry and their network of AOG-Desks

provides customers with full 24/7/365 coverage. Looking at the opportunities at hand and the increasing demand for a dedicated Aero Parts Product Manager Schenker decided to add another location to the network. Ideally located in proximity to Beijing Capital Airport and supported by a unique set-up consisting of air ride trucks, a modern logistics center with bonded warehouse facilities, Julien Bachelet will be your future contact for all aero parts related matters in the Region North China.

## Made in India Tradeshow

From September 8-11, Indian and Chinese companies had the opportunity to promote their products and services at this years' "Made in India" Tradeshow. Our Sales Team used this as a platform to introduce the companies' core competences and to outline Schenker and BAX Global's position as leading freight service providers on the sub-continent.
